## Hitch Installation Instruction

| Part# | HT-X30203  | Application | For 2015-2022 Chevrolet Colorado All\2015-2022 GMC Canyon All |
|-------|--|-------------|---|
| Step  | Description  |             |   |
| 1     | Assemble Hitch Body (A) and Mounting Brackets (B, C) with (6) M12X1.75-35 Hex Bolts, (10) M12 Flat Washers, (6) Lock Washers, (4) M12 Hex Nuts.(Hardware in "HW A"). <b>Note:Finger tighten only. Do not fully tighten at this time.</b>   |             |   |
| 2     | Lower spare tire using the vehicle service tools located in the cab of the truck. Loosen the spare tire support bracket by removing (2) bolts with a 13mm socket by the spare winch. Remove the 2 bolts from the factory hitch or cross member and transfer the (2) clip nuts onto the spare tire support bracket. |             |   |
|       |    |             |   |
| 3     | Remove (4) bolts securing the factory cross member or hitch to the frame rail with a 21mm socket. Set hardware aside for reuse during hitch installation. <b>Note:</b> The bumper shares the same mounting points and should be supported from underneath.   |             |   |
|       |    |             |   |
| 4     | Check to be sure that all wiring clears and slowly pull factory cross member or hitch downward and remove from vehicle. Clean weldnuts as needed with lubricant and brush. Replace with hitch, which will mount in the space between the frame and the bumper mounting plates.                                     |             |   |
|       |    |             |   |
| 5     | Using the existing mounting hardware, attach the bottom mounting bolts (2 places each side) and loosely secure so that bumper placement adjustments can be made. Adjust bumper position to align with side mounting holes and secure remaining (4) bolts with a 21mm socket.                                       |             |   |
